

YOUR DESIGN GUIDE

The team at Harbour Kitchens & Millwork has created this design guide to help you and us. This step by step guide will be a starting line for your project. After filling out this page with your preferences and notes, bring it into our showroom where one of our designers will go over it with you.

1. Is your project a renovation or new build? Renovation New Build

2. What is the scope of your project? (circle all that apply)

Kitchen	Bathroom	Countertops	Media Centre	Powder Room	Office
Laundry Room	Bar	Closet	Fireplace Surround	Garage Storage	

3. What style do you prefer? (circle all that apply)

Traditional	Ultra Modern	Transitional	Coastal	Minimalistic
Craftsman	Farmhouse	Industrial	Contemporary	

**Not sure what style you like? Check out houzz.com! All these styles and more are featured!

4. What is your maximum budget? _____

5. After you know what you want, find your parameters...
Get your home plans from your builder or do a rough measure of your space yourself.
(see our "Measuring Your Space" on page 2)

Once you have found what you want and what you have, call our showroom to book a consult or come in and sit down with one of our professional designers. *Don't forget to bring all your information!*

MEASURING YOUR SPACE

Having a full set of measurements allows our designers to work quicker and begin your project sooner. To measure your space is simple. The only things you need is a tape measurer, pen and paper - and maybe an extra set of hands to help. Follow these steps to get all the measurements our designers need.

1. FIND YOUR SPACE

Measure the *length of every wall* that is relevant to the space you're looking to customize. Don't forget the *ceiling height!*

2. OPENINGS

Find the width, height and centerlines of your *windows, doors and cutouts*.

3. APPLIANCES (IF ALREADY EXISTING)

If you are doing a renovation, to save some cash, you can keep your *appliances* in their existing spot, so giving the centerlines is very helpful for our designers.

4. SURROUNDINGS

An idea of what's around your space and maximum extension of your space.

When you're done, you should have something that looks a little like this...
